Abstract of JP 9121197 (A)

PROBLEM TO BE SOLVED: To provide a broadcast signal recording system suitable for air check or the like. **SOLUTION:** The system is provided with a registration means (F102 by which a specific character string is registered as a keyword, and a control means (F106, F107, F110) discriminating (F105, F109) the presence of a character string corresponding to the keyword registered with respect to character data obtained by a character decode means and applying an operation control signal to a recording means depending on the result of discrimination. That is, the recording operation desired by the user is naturally executed by controlling the start/stop or the like of the recording in response to the multiplexed character data.
